

Injury Related Deaths, 2001-2005

During 2001-2005, 223 injury related deaths occurred in the Alexandria Health District.

Demographics (age, gender, race)

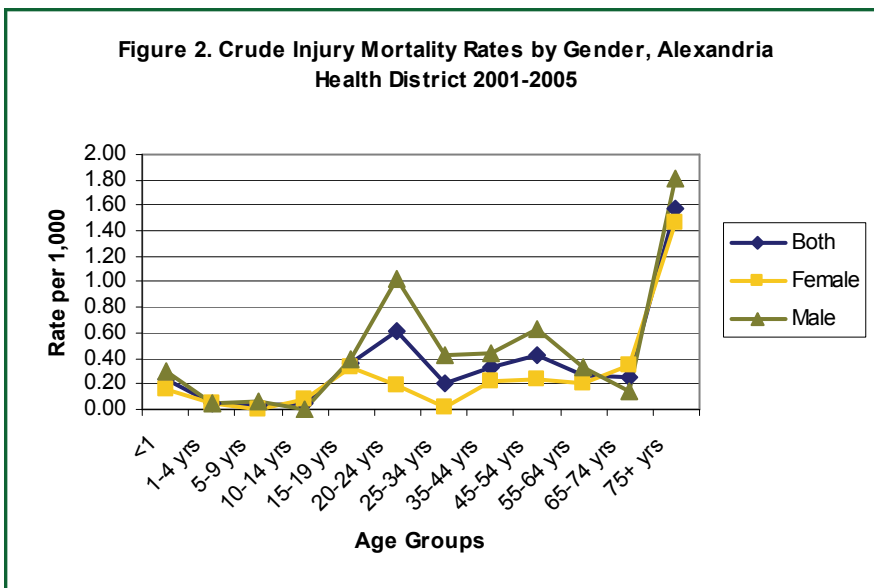

- Males were more likely than females to die from injuries across every age group except 10-14 year olds and those 65-74 (see Figure 2).
- The elderly (65 and over) experienced a higher number of injury deaths than any other age group. 30% of these deaths were the result of falls, 13% were from suffocation, and 8% were the result of motor vehicle traffic crashes.
- White, non-Hispanic injury death rates were higher than the rates for all other races/ethnicities (Black, non-Hispanic; Other, non-Hispanic; and Hispanic, any race).

Mechanism and Intent

- 56% of injury deaths were unintentional. Motor vehicle traffic crashes (28%), falls (18%), and poisonings (10%) accounted for 56% of all unintentional injury deaths.
- Suicides accounted for 26% of injury deaths. The three leading mechanisms of suicides were: suffocations (33%), firearms (29%), poisonings (22%).
- Homicides accounted for 16% of injury deaths. 50% of these were the result of a firearm.
