

During 2001-2005, 316 injury related deaths occurred in the Arlington Health District.

Injury Related Deaths, 2001-2005

Figure 1. Arlington Health District and Virginia Age-Adjusted Mortality Rates, 2001-2005

Mechanism and Intent

- 65% of injury deaths were unintentional. Falls (27%), motor vehicle traffic crashes (26%), and poisonings (20%) accounted for 73% of all unintentional injury deaths.
- Suicides accounted for 26% of injury deaths. The three leading causes of suicides were: firearms (40%), suffocation (24%), and poisonings (14%).
- Homicides accounted for 7% of injury deaths. 31% were the result of a firearm and another 31% were from other transportation injuries not related to motor vehicles.

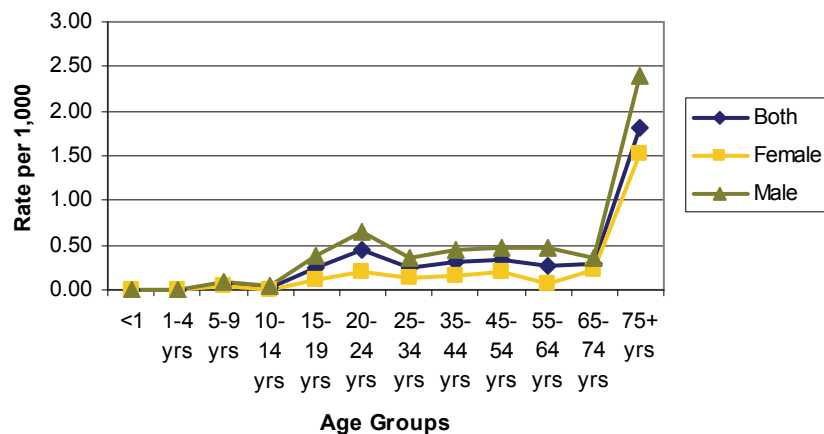

Demographics (age, gender, race)

- Males were more likely than females to die from injuries across every age group. Overall, males were 2 times more likely to die as a result of an injury than females (see Figure 2).
- The elderly (65 and over) experienced a higher number of injury deaths than any other age group. 50% of these deaths were the result of falls, 11% were the result of suffocation, and 7% were from motor vehicle traffic crashes.
- Black, Non Hispanic injury death rates were slightly higher than White, Non Hispanic and Hispanic (any race) injury death rates.

Table 1. Leading Causes of Childhood and Adolescent Injury Death, Arlington Health District 2001-2005

0-4 yr olds (N=0)	5-9 yrs old (N=3)	10-14 yrs old (N=1)	15-19 yr olds (N=9)
	MVT (N=2)	Firearm (N=1) (Suicide=1)	MVT (N=4)
	Other (N=1)		Poisoning (N=2)
			Suffocation (N=1)
			Firearm (N=1) (Homicide=1)

During 2001-2005, 3,100 injury related hospitalizations occurred in the Arlington Health District.

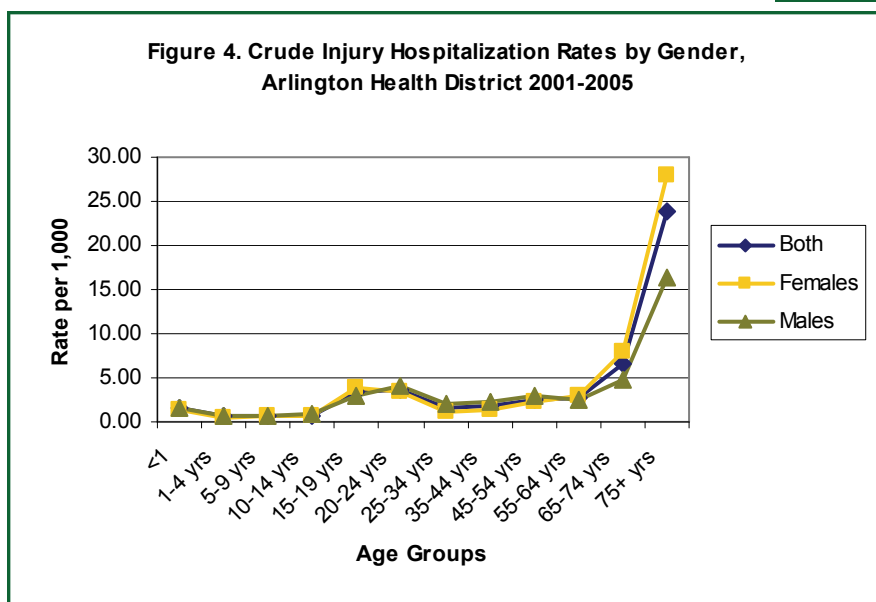

Demographics (age, gender, race)

- Males were more likely than females to be hospitalized for an injury across every age group except 15-19 yr olds and those 55 and older.
- The elderly (65 and older) were more likely to be hospitalized for an injury than any other age group. 82% of these hospitalizations were the result of falls.
- Overall, White, Non Hispanic injury hospitalization rates 1.1 times higher than Black, Non Hispanic rates and 1.5 times higher than Hispanic (any race) injury hospitalization rates.

Mechanism and Intent

- 83% of injury hospitalizations were unintentional. Falls (63.4%) and motor vehicle traffic crashes (8.7%) accounted for 72% of all unintentional injury hospitalizations.
- Self-inflicted injuries accounted for 13% of injury hospitalizations. Poisonings (81%) and cuts/pierces (14%) were the leading causes of self-inflicted injuries.
- Assaults accounted for 3% of injury hospitalization. The two leading causes were; Cut/pierce (33%) and struck by/against (30%).

0-4 yr olds (N=50)	5-9 yrs old (N=33)	10-14 yrs old (N=28)	15-19 yr olds (N=119)
Falls (N=22)	Falls (N=22)	Struck by/against (N=6)	Poisoning (N=59)
Poisoning (N=5)	Bicycle (N=2)	Falls (N=5)	Falls (N=13)
Struck by/against (N=2)	Drowning (N=2)	MVT (N=4)	MVT (N=13)
Cut/pierce (N=2)	Poisoning (N=2)	Bicycle (N=4)	Struck by/against (N=9)
Drowning (N=1)	Struck by/against (N=1)	Poisoning (N=3)	Cut/pierce (N=9)

*MVT=Motor Vehicle Traffic (mvt crashes related to and involving occupants, motorcyclists, pedestrians, and pedal cyclists.)
