

## Injury Related Deaths, 2001-2005

During 2001-2005, 589 injury related deaths occurred in the five counties and one city that make up the Lord Fairfax Health District. The three localities with the highest percentage of injury deaths were: Frederick (29%), Warren (21%), and Shenandoah (18%).

### Demographics (age, gender, race)

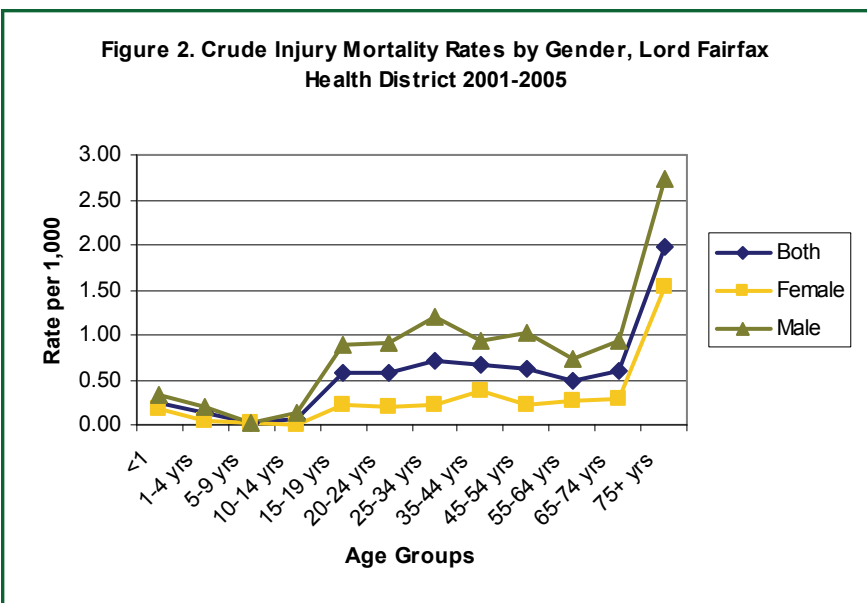

- Males were more likely than females to die from injuries across every age group (see Figure 2). Overall, males were 2.7 times more likely to die from injuries.
- The elderly (65 and over) experienced a higher number of injury deaths than any other age group. 17% of these deaths were the result of falls, 16.3% were the result of motor vehicle traffic crashes, and 14% were the result of firearms.
- Overall, White injury death rates were higher than rates for all other races (Black and Other).

### Mechanism and Intent

- 70.4% of injury deaths were unintentional. Motor vehicle traffic crashes (40%), poisonings (18%), and falls (10.1%) accounted for over 68% of all unintentional injury deaths.
- Suicides accounted for 25% of injury deaths. The three leading mechanisms of suicides were: firearms (65.3%), suffocation (17%), and poisonings (14.3%).
- Homicides accounted for 3.4% of injury deaths. 65% of these were from a firearm.

**Table 1.** Leading Causes of Childhood and Adolescent Injury Death, Lord Fairfax Health District 2001-2005

0-4 yr olds (N=9)	5-9 yrs old (N=2)	10-14 yrs old (N=5)	15-19 yr olds (N=37)
MVT (N=2)	MVT (N=2)	Firearm (N=3) (Suicides=3)	MVT (N=15)
Suffocation (N=2)		MVT (N=1)	Firearm (N=8) (Suicides=8)
Drowning (N=1)		Other Land Transport (N=1)	Poisoning (N=7)
Falls (N=1)			Drowning (N=3)

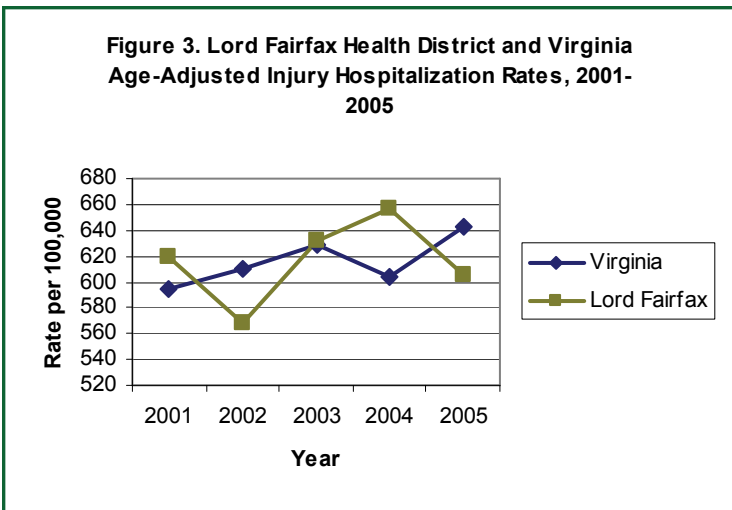

\*MVT=Motor Vehicle Traffic (MVT crashes related to and involving occupants, motorcyclists, pedestrians, and pedal cyclists.)

During 2001-2005, 6,274 injury related hospitalizations occurred in the five counties and one city that make up the Lord Fairfax Health District. The three localities with the highest percentage of injury hospitalizations were: Frederick (30%), Shenandoah (18%), and Warren (17%).

### Demographics (age, gender, race)

- Males were more likely than females to be hospitalized for an injury across every age group except for those 55 and older.
- The elderly (65 and older) were more likely to be hospitalized for an injury than any other age group. 80% of these hospitalizations were the result of unintentional falls.
- Overall, White injury hospitalization rates were 1.5 times higher than Black injury rates.

### Mechanism and Intent

- 87% of injury hospitalizations were unintentional. Falls (54%) and motor vehicle traffic crashes (17.2%) accounted for over 70% of all unintentional injury hospitalizations.
- Self-inflicted injuries accounted for 7% of injury hospitalizations. Poisonings (87%) and cut/pierces (7.1%) were the leading causes of self-inflicted injuries.
- Assaults accounted for 2.3% of injury hospitalization. The two leading causes were: struck by/against (36.1%) and cut/pierce (23%)

**Table 1. Leading Causes of Childhood and Adolescent Injury Hospitalizations, Lord Fairfax Health District 2001-2005**

0-4 yr olds (N=111)	5-9 yrs old (N=90)	10-14 yrs old (N=174)	15-19 yr olds (N=371)
Falls (N=38)	Falls (N=36)	Falls (N=53)	MVT (N=122)
Poisoning (N=15)	MVT (N=8)	Transport, other (N=22)	Poisoning (N=66)
MVT (N=8)	Bicycle (N=7)	MVT (N=21)	Falls (N=35)
Drowning (N=4)	Struck by, against (N=7)	Struck by, against (N=17)	Transport, other (N=34)
Struck by, against (N=3)	Transport, other (N=7)	Poisoning (N=15)	Struck by/against (N=31)

\*MVT=Motor Vehicle Traffic (MVT crashes related to and involving occupants, motorcyclists, pedestrians, and pedal cyclists.)
